## ONCOLOGY MEDICAL EXAMINATION REPORT

Patient Name:	Michael Thompson
Attending Physician:	Dr. Emily Carter
Department:	Oncology
Date of Visit:	17 February 2026
Hospital ID:	CGH-ONC-2026-3159

The patient presented with persistent headaches and localized swelling in the left temporal region.

Diagnostic imaging, including CT and MRI scans, identified a mass lesion consistent with a primary head and neck malignancy. Biopsy results confirmed malignant cellular growth requiring further oncological management.

Diagnosis: Head and Neck Cancer (Pending Staging Confirmation).

### Treatment Plan:

- Referral to multidisciplinary oncology team.
- Additional imaging for staging purposes.
- Discussion of treatment options including surgical intervention, radiation therapy, and chemotherapy depending on staging results.
- Symptom management and regular monitoring recommended.

The patient has been informed about the findings and advised to attend scheduled oncology consultations.
